APPLICATION DATA SHEET FOR

Part Description	TRANSFORMERS AND INDUCTORS, POWER
Part Number and Type	JAXA 2110/A152-T000
Applicable Specification	JAXA-QTS-2110 JAXA-QTS-2110/A152

August 2022

Prepared and Established by Tamura Corporation

Issued by Japan Aerospace Exploration Agency

This document is the English version of JAXA QTS/ADS which was originally written and authorized in Japanese and carefully translated into English for international users. If any question arises as to the context or detailed description, it is strongly recommended to verify against the latest official Japanese version.

The release date of the English version of this specification: February 10, 2023

**COMMON PARTS AND MATERIALS, SPACE USE,
APPLICATION DATA SHEET FOR**

1. GENERAL

1.1 Scope

This Application Data Sheet details additional general information necessary for parts selection and/or equipment design that is not contained in JAXA-QML. Users are encouraged to look into other information sources for specific applications, and responsible for their decisions on part selection and usage.

1.2 Applicable Documents

2. SUMMARY OF PRODUCTS

The transformer described in this data sheet is an open type high reliability product, which satisfies the outgassing requirements, for electric equipment to be installed on satellites and/or launch vehicles.

2.1 Externals, Dimensions and Mass

Externals, dimensions, mass and markings of the transformer are shown below.

Part number	Externals, dimensions and marking	Mass (nominal value)
JAXA 2110/A152-T000	See Figure 1	304g

2.2 Construction

The transformer is of an epoxy resin impregnated open type. Magnet wires are wound around a toroidal core. Direct wires or PTFE insulated wires are pulled out to serve as the leads. The following figure shows a simplified internal construction.

E-A4-30342C

3. USAGE

3.1 Rating

The transformer is rated as follows.

Part number	Rated power	Operating frequency	Operating ambient temperature (1)	Temperature rise (1)	Input voltage
JAXA2110/A152-T000	97VA	50kHz	-55°C to 100°C	30°C max.	50Vrms

Note (1) Operating ambient temperature + Temperature rise = Maximum operating temperature S (130°C) max.

3.2 Installation Methods

It is recommended to install the transformer as follows.

- (a) Use both a retainer plate and epoxy adhesive. The retainer plate shall be fastened with stainless-steel screws.

4. CHARACTERISTICS UNDER NORMAL OPERATING CONDITIONS

4.1 Electrical Characteristics

The transformer satisfies the electrical characteristics specified in the detail specification. Test results are shown in Tables 1 and 2.

4.2 Environmental Resistance

The transformer satisfies the environmental conditions specified in the detail specification. Test results are shown in Tables 1 and 2.

4.3 Outgassing

The transformer satisfies the outgassing requirements specified in the detail specification. Outgassing data of organic materials used in the transformer is shown in Table 3.

5. HANDLING AND STORAGE CONDITIONS

- (1) Use caution not to expose the transformer to excessive stresses such as shock by drop.
- (2) It is recommended to store the transformer under the following conditions.

Items	Conditions
(1) Temperature	+0°C to +35°C
(2) Relative humidity	75%RH max.
(3) Pressure	86kPa to 106kPa
(4) Others	It is recommended to store where vibrations and shocks are minimal

6. RELIABILITY

6.1 Possible Failure Mode

- Open circuit (breaking, bad connection)
- Short circuit (Insulation breakage, insulating film breakage)
- Low Inductance (iron core breakage, flexure, layer short)

7. PRECAUTIONS

7.1 Instructions for Purchaser

If purchaser's specification is included in the "qualification coverage" specified in the detail specification, JAXA-QTS-2110/A152, Paragraph 3.1, or if "qualification by similarity" specified in JAXA-QTS-2110, Appendix A (Paragraph A.3.1.1.1), is applicable, products can be provided as JAXA certified parts. In this case, the purchaser can specify requirements for specific applications in product specification (refer to JAXA-QTS-2110, Paragraph 6.3) for each procurement.

7.2 Instruction for Use

- Apply sufficient adhesive to the bonding surface.
- The acceptable adhesive is rigid epoxy adhesive.
- It is recommended to maintain the operating frequency deviation within $\pm 5\%$ of the rated operating frequency.
- It is recommended to operate the transformer within the rated output power and direct current.
- Operate the transformer in the temperature class S (130°C) as a maximum.
