a) Insulation Resistance

(Standard) Insulation resistance in accordance with test method 302 of MIL-STD-202 is specified as follows. "If the instrument reading indicates that an insulation resistance meets the specified limit (2 min.), and is steady or increasing, the test may be terminated before the end of the specified period (2 min.)"

(Shortening of test time) From the test result and verification result, it was verified that the instrument reading increases or become stable within 2 minutes from the start of voltage application. Therefore, when the above condition is met and the measurement reaches the 10-times of 10 thousand $M\Omega$ as a minimum (which is more than 100 thousand $M\Omega$), the test may be terminated before 2-minute passes.
